

HF 200 W ALL MODE TRANSCEIVER

MARK-V FT-1000MP

TECHNICAL OVERVIEW

200 W 50 MHz Transverter

FTV-1000

HF/50 MHz 1 kW Linear Amplifier

VL-1000

 **YAESU**
Choice of the World's top DX'ersSM

CONTENTS

1. Building on the Receiver Heritage of the FT-1000/FT-1000MP

1. Front-end Processor	3
(A) Antenna Selection and Switching	3
(B) Front-end Attenuator	3
(C) All-New VRF (Variable RF Front-end Filter)	3
(D) Input High-Pass and Band-Pass Filtering	6
(E) RF Preamplifiers and Intercept Point Optimization (IPO)	6
(F) RF Automatic Gain Control (AGC)	6
(G) RF Gain Control	6
2. Hybrid Analog and Digital-Domain IF System	7
(A) First Mixer and Post-Mixer Filter	7
(B) IF Amplifiers	7
(C) IF Main Selectivity Filters	7
(D) New! Collins® Mechanical Filter Built In!	8
(E) New Technology Advance: IDBT System	8
(F) Analog IF Filtering System	9
(G) IF Analog Noise Blanking Circuitry	10
(H) APF Ultra-Narrow Filtering (CW/Data Modes)	10
(I) EDSP Noise Reduction	11
(J) EDSP Control Function	12
(K) EDSP Digital Auto-Notch Filter	12
(L) (Analog) Detection Circuits	12
(M) Digital Detectors	12
(N) Receiver Audio Circuits	12
(O) Sophisticated Dual Receive System with Independent AGC Loops	13
(P) Independent Sub Receiver Unit	13

2. All-New, Powerful 200 Watt Transmitter Section

1. Microphone Input and Audio Stage	14
(A) Microphone Amplifier Stage	14
(B) Analog Modulator/Mixer and Transmit IF Stages	14
(C) RF Speech Processor	14
(D) EDSP Digital Microphone Equalizer	14
(E) Power Gain Control	15
(F) Transmit Monitor	15
2. Transmit PA Unit	15
(A) Industry-leading 200 Watts of Power Output	15
(B) Yaesu-exclusive Class-A Bias Selection	15
3. High-power Automatic Antenna Tuner	17

3. EDSP (Enhanced Digital Signal Processor)

1. Fundamental EDSP Architecture	18
(A) Receiver	18
(B) Transmitter	20
2. Key Features and Benefits of EDSP	20

4. Local Oscillator Design Features

1. Single-Crystal-Reference Main Oscillator System	21
2. 0.5 ppm Built-in High Stability Reference Oscillator	22
3. Super-High-Resolution (0.625 Hz) DDS	22

5. Control Circuitry

1. Control Circuit Architecture	23
2. High-Speed Dial Processing	23

6. Display Features

1. Large Display with Multi-Function Meter	24
2. Frequency Display	24
3. Enhanced Tuning Scale Display	24
4. Multi-Display Panel	24

7. World-Class CW Performance

1. Full Break In (QSK)	25
2. Electronic Keyer Built In	25
3. CW "Normal/Reverse" Facility	25
4. CW SPOT	25
5. CW Tuning Meter	25
6. CW Pitch Control	26
7. Two Key Input Jacks	26
8. Contest Memory Keyer	26

8. Convenience Features for HF Operation

1. Improved Ergonomics on Front Panel	27
2. Shuttle Jog Dial	27
3. Band Selection Keys and VFO Registers	27
4. Direct Keypad Frequency Entry	27
5. VRF/MEM CH Control	27
6. Versatile Memory Functions	28
7. VFO Selection Switches & AF Reverse	28
8. Quick Split Feature	28
9. Carrier-Controlled Slow Scan	29
10. VFO Tracking	29
11. Clarifier	29
12. Remote Control Terminal	29

9. Ultra-quiet FP-29 Switching Power Supply

10. Menu Customization of Transceiver Features

1. Menu Mode	31
2. Direct Menu Mode Access	34
3. [USER] Configuration Mode	34
4. Customization of Carrier Points	34

11. Personal Computer Control : The CAT System

1. Serial Communication Data Format	35
2. CAT System Coding Example	35

12. DATA-Mode Features of the MARK-V FT-1000MP

1. Connections for AFSK Operation : Use Packet Jack/ Packet Mode	39
2. Connections for FSK RTTY Operation	40
3. Generic Connections to PATCH/PTT/AF OUT Jacks	40
4. SSTV Scan Converter Connections	41
5. WeatherFax Monitoring	41
6. Linear Amplifier Interconnections	41
(A) Interfacing to Yaesu VL-1000 Solid-State 1000 W Linear Amplifier	41
(B) Interfacing to Other Linear Amplifiers	42
(C) Transverter Interfacing	42

13. Top Panel Controls and Interconnection Jacks

14. Specifications

15. Accessories & Options

1. 200 Watts 50 MHz Transverter : FTV-1000	45
(A) FTV-1000 Receiver Front End : Engineered for Highest Performance	45
(B) 200 Watt High-Power Amplifier Stage	46
(C) Ultra-Clean Class-A Bias Capability	46
(D) Ergonomic Effortless Operation	46
(E) Protection Circuits and Indicators	46
(F) Two Antenna Jacks	47
(G) 50 MHz Frequency Display on MARK-V	47
(H) Use with VL-1000 Quadra System for High Power Output	47
(I) Specifications	47
2. HF/50 MHz 1 kW Linear Amplifier : Quadra System	48
(A) Innovative RF Design Featuring Quad Push-Pull Modules	48
(B) Microprocessor-Based High-Power Automatic Antenna Tuner	48
(C) Huge, High-Resolution Liquid Crystal Display Monitors Amplifier Status	48
(D) Active Safety and Protection Features	49
(E) Clean, High-Level Engineering Design	49
(F) High-Quality, Self-Maintaining Switching Relays	49
(G) Direct Flow Cooling System	49
(H) Two Input and Four Output Antenna Connectors	49
(I) Matching Power Supply : VP-1000	49
(J) VL-1000 Specifications	50
(K) VP-1000 Specifications	50
